**Notice :** Please use the product safely and correctly in accordance with the contents of the Product & Installation Guide, and disassembling this product may cause malfunction, and static electricity, and will not be responsible for personal or property damage.

## History

Version	Created Date	Changes
Rev 0.1	2020-10-22	Release date of the initial Document
Rev 0.5	2020-11-03	Added MTBF, Installation guide
Rev 0.6	2020-11-06	Safety Labels, FCC info. added
Rev 0.7	2020-11-13	Revised the title of the document Revised the power consumption information Added MTBF at 25°C Added the ESD caution marking and statement Revised the Installation/Removal Instruction Revised the trouble shooting
Rev 0.8	2020-12-04	Added model 3FE49207AA
Rev 0.9	2020-12-10	Added EEPROM data, Revised the Safety Labels & Regulatory Compliance. Revised the Hardware Features Added Troubleshooting Added CLI
Rev 1.0	2020-12-21	Revised EEPROMM A2 Tx High Alaram & Warnig Updated Compliance Information
Rev 1.1	2020-12-30	Revised Safety labels – FCC Notice added Revised EEPROMM A2 Tx High Alaram & Warnig
Rev 1.2	2021-06-08	Change 1PPS Timing Modify telnet/SSH
Rev 1.3	2021-06-17	Add switch<->gemport drop check CLI Packet filter/counter CLI
Rev 1.4	2021-08-17	Modify CLI text
Rev 1.5	2021-11-03	Added UKCA marking Change EEPROM's default value (address 64,65)
Rev 1.6	2021-11-23	Modify RX_LOS description
Rev 1.7	2021-12-21	Add key info CLI Modify CLI text
Rev 1.8	2022-02-18	Modify Software Features Add Remote Debug by OMCI
Rev 1.9	2022-05-09	Support Soft TX Disable Add Remote Debug CLI(capture and reboot) Modify CLI text
Rev 2.0	2022-07-29	Modify RX LOS description
Rev 2.1	2022-11-21	Modify Software Features
Rev 2.2	2023-01-27	Change the value of the TX Power High Warning threshold Add test rogue-onu CLI

**XGSPOON-STICK**

# 1. Introduction

## 1.1. Overview

This document is intended to guide network operators and related engineers, and focuses on the XGSPON-STICK specification.

## 1.2. Document Notation

The following <Table 1> explains icons used in this guide.

**Table 1. Information and Warning**

Icon	type	Description
	<b>Warning Attention</b>	Risk of injury to persons, loss of data, or system damage.
	<b>Information</b>	Important functions or features, commands, tips.

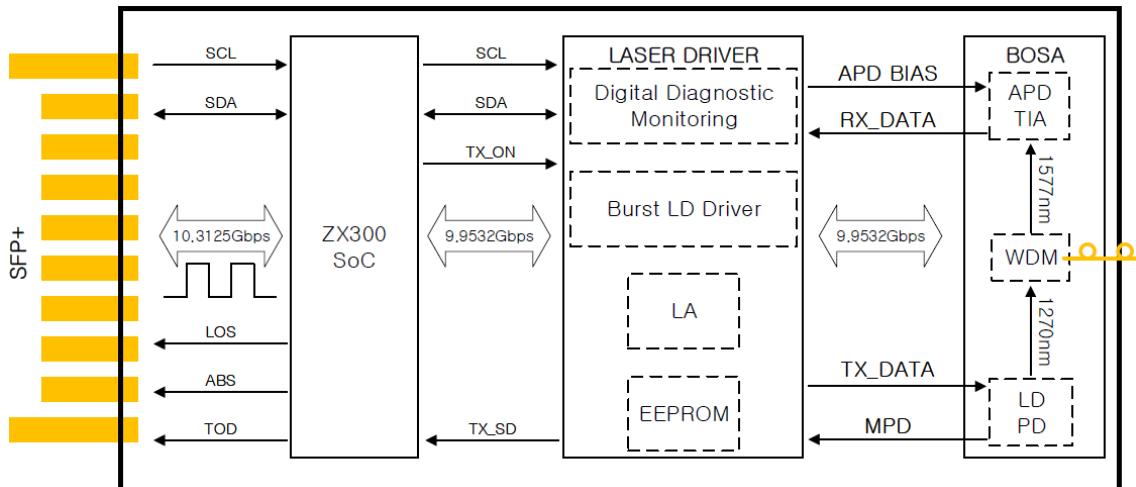

# 2. Product Specifications

## 2.1. Description

ZARAM XGSPON-STICK is "Embedded XGSPON-MAC Optical Network Terminal (ONT)" with Small Form-factor Pluggable (SFP+) packaging.

The XGSPON-STICK provides a pluggable XGSPON interface for "Mobile backhaul application" and "FTTx connection over existing L2 Ethernet switch". This is also providing symmetric/asymmetric PON-MAC protocols, which is including a sophisticated ONT management system such as alarms and provisioning.

The 10GPON MAC fits into existing communications equipments, providing service providers with a smoothly upgrading the network infra to 10GPON.

[Figure 2-1] XGSPON-STICK Block Diagram.

## 2.2. Hardware Features

- Simplex SC/UPC Connector, Integrated Diplexer Transceiver
- Compliant with ITU-T G.9807.1 XGS-PON (N1/N2)
- Support 10Gbps bi-directional traffic capability.
- 1270nm Burst-Mode Transmitter with DFB Laser
- 1577nm Continuous-Mode Receiver with APD-TIA
- Compliant with SFF-8431/SFF-8472/GR-468
- Single 3.3V Power Supply
- Commercial and Industrial Temperature Available
- Low Power consumption: Typical < 2W Worst Case (85°C) <2.1W
- Designed to interoperate with 3<sup>rd</sup> party L2/L3 switch with SFP+ type uplink port

## 2.3. Software Features

- Compliant with ITU-T G.988 GPON OMCI
- Support SSH/Telnet for Management
- Support 8K MAC entries
- Support multicast IGMP snooping
- Support advanced data features including VLAN-translation, modification and transparency
- Compliance with IEEE 1588v2 8275.1 boundary clock, Support G.8273.2 ClassB performance of pair of media converters
- Support ToD / 1PPS (software option1)
- Support "Plug-and-play" configuration via OLT
- Support Dying Gasp notification (software option1)
- Support Rogue ONU Detecting
- Wire-speed with minimum frame-size
- Support Jumbo frames up to 9K
- Support AES (DS/US Unicast, DS/US OMCI, DS Multicast) (comment 1,2)
- Support 8TCONT / 64GEM + 2GEM(Broadcast /Multicast)

Software option1) ToD / 1PPS / Dying Gasp function disabled by software.

If you want to use the ToD or 1PPS or Dying Gasp function, please further contact with related PLM

(comment 1) Originally, US OMCI AES works the same as enable/disable of DS OMCI AES, but it operates the same as US Unicast AES setting due to HW limitation.

To enable US OMCI AES, enable US Unicast AES.

(comment 2) DS Multicast AES is not tested.

## 2.4. Product Information

PART NUMBER	VOLTAGE	TEMPERATURE	WAVELENGTH	UPLINK INTERFACE	SERVICE INTERFACE
ZXOS11NPI	3.3V	-40 °C ~ +85°C	1577 DOWN STREAM, 1270 UP STREAM	10GPON port (SC/UPC)	SFP+ XFI interface

## 2.5. Hardware Information

Main Chip	ZARAM SoC (ZX300)
Flash Memory	Embedded 128Mbit

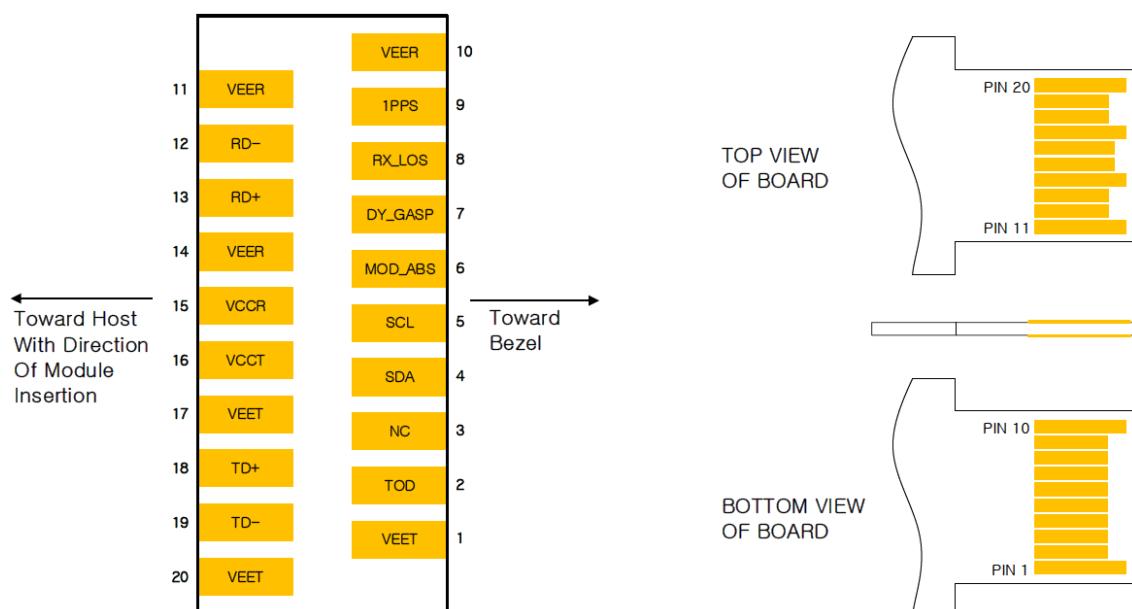

## XGSPON-STICK

---

Memory	Embedded 512Mbit, LPDDR SDRAM
Wavelength	1577nm Downstream, 1270nm Upstream
Uplink Interface	10 GPON Port (SC/UPC, SFP Compliant interface)
Service Interface	SFP+ Compatible SERDES Interface

# 3. Interface Connector

## 3.1. Pin Map

[Figure 3-1] XGSPON-STICK PIN MAP Diagram.

## 3.2. Pin Assignment

No.	Symbol	Level / Logic	Description	Note
1	VeeT	NA	Module Transmitter Ground	

## XGSPON-STICK

2	ToD	LVTTL-O	Time of day	1
3	NC	LVTTL-I		4
4	SDA	LVTTL-IO	2-Wire Serial Interface Data Line	2
5	SCL	LVTTL-I	2-Wire Serial Interface Clock	2
6	MOD_ABS	LVTTL-O	Module Absent, Set to low	3
7	Dying_Gasp	LVTTL-I	Default : not used / Dying Gasp Function(Software option)	
8	RX_LOS	LVTTL-O	Loss of Receiver Signal Indication	3
9	1PPS	LVTTL-O	1 Pulse Per Second	
10	VeeR	NA	Module Receiver Ground	
11	VeeR	NA	Module Receiver Ground	
12	RD-	CML-O	Receiver Inverted Data Output	
13	RD+	CML-O	Receiver Non-Inverted Data Output	
14	VeeR	NA	Module Receiver Ground	
15	VccR	NA	Module Receiver 3.3V Supply	
16	VccT	NA	Module Transmitter 3.3V Supply	
17	VeeT	NA	Module Transmitter Ground	
18	TD+	CML-I	Transmitter Non-Inverted Data Input	
19	TD-	CML-I	Transmitter Inverted Data Input	
20	VeeT	NA	Module Transmitter Ground	

Note:

1. Output from the MCU\_UART\_TX port.
2. 10K pull-up is applied inside the XGSPON stick.
3. It needs to be pulled up with 4.7K-10K ohms to a Host\_Vcc on the host board.
4. NC PIN (It needs to be pulled up or down, or NC on the host board.)

Software option) ToD / 1PPS / Dying Gasp function disabled by software.

If the ToD or 1PPS or Dying Gasp function is required, you need to upgrade software with the function enabled

## 3.3. Pin Description

### 3.3.1. VccT/VccR (Power Supply)

Refer to the table below for the Input Voltage requirement

Pin no.	Pin name	Specification	Min	Typical	Max	Units
16	VccT		3.15	3.3	3.45	V

## XGSPON-STICK

15	VccR	Normal Operating Voltage				
1,17,20	VeeT	GND		0		
10,11,14	VeeR					

Note: The Operatin Voltage Range must never be exceeded.

### 3.3.2. ToD (Time of Day)

The product processes timing information received from OLT and outputs timing information through this pin.

Output is from the MCU\_UART\_TX port.

Pin no.	Pin name	Pin Description	Direction
2	ToD	timing information data Baudrate : 38400	Output

output data example :

```
$GPZDA,084414.00,20,10,2020,00,00*68
$GPZDA,084415.00,20,10,2020,00,00*69
$GPZDA, HHMMSS .00 ,DD ,MM ,YYYY ,00 ,00 *checksum
```

### 3.3.3. SDA/SCL (I2C Slave Interface)

The pin is for 2-wire serial interface communication.

This is for the host to check the DDM(Digital Diagnositc Monitoring) information of the XGSPON STICK.

Pin no.	Pin name	Pin Description	Direction
4	SDA	I2C Serial Data	Bi-direction
5	SCL	I2C Serial CLK	input

Note: 1. 10K pull-up is applied inside the xgspont stick.

2. I2C Slave Address : A0/A2

### 3.3.4. MOD\_ABS

The pin is for the host to confirm the XGSPON STICK presence.

It is set to low.

Pin no.	Pin name	Pin Description	Direction

#### XGSPON-STICK

6	MOD_ABS	Control from MCU GPIO pin. Set to low	Output
---	---------	--	--------

#### 3.3.5. Dying\_Gasp

The pin is not default but optional which can be used as Dying\_Gasp function by software setting. If input level is 0, it will report Dying\_Gasp information to OLT when the function is activated.

Pin no.	Pin name	Pin Description	Direction
7	Dying_Gasp	Input signal from HOST. low active	Input

#### 3.3.6. RX\_LOS

The pin is Loss of Signal output pin.

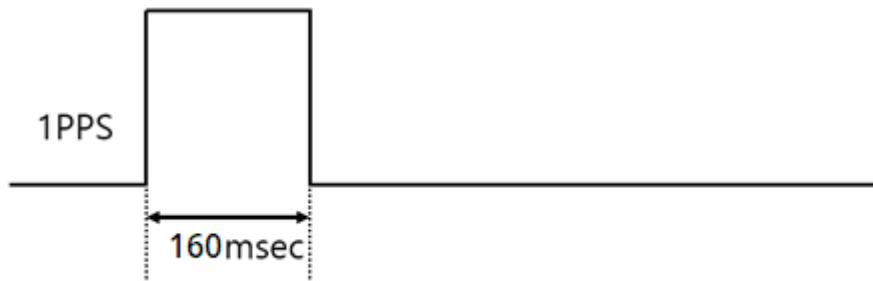

Pin no.	Pin name	Pin Description	Direction
8	RX_LOS	Control from MCU GPIO pin. When LOS, Set to high.  NOTE: LOS pin control is applied from V089.02 version. Versions prior to V089.02 always keep low.	Output

#### 3.3.7. 1PPS

This pin is output 1PPS.

## XGSPON-STICK

---

Pin no.	Pin name	Pin Description	Direction
9	1PPS	Output 1PPS signal	Output

### 3.3.8. RD+/- (DIFFERENTIAL ETH TX DATA)

The pin is 10Gbps Ethernet differential TXD output interface.

Pin no.	Pin name	Pin Description	Direction
12	RD-	10Gbps Ethernet interface TXD- TRANSMITTER_DATA_N to HOST 10.3125 Gbps SERDES	output
13	RD+	10Gbps Ethernet interface TXD+ TRANSMITTER_DATA_P to HOST 10.3125 Gbps SERDES	output

### 3.3.9. TD+/- (DIFFERENTIAL ETH RX DATA)

The pin is 10Gbps Ethernet differential RXD input interface.

Pin no.	Pin name	Pin Description	Direction
18	TD+	10Gbps Ethernet interface RXD+ RECEIVER_DATA_P from HOST 10.3125 Gbps SERDES	input
19	TD-	10Gbps Ethernet interface RXD- RECEIVER_DATA_N from HOST 10.3125 Gbps SERDES	input

# 4. Hardware Specification

## 4.1. Absolute Maximum Ratings

PARAMETER	SYMBOL	MIN	MAX	UNITS	NOTE
Storage Temperature	$T_S$	-40	+85	°C	
Storage Humidity	$H_S$	5	85	%	
Power Supply Voltage	$V_{CCR}/V_{CCT}$		+3.6	V	

## 4.2. Recommended Operating Conditions

PARAMETER	SYMBOL	MIN	TYP	MAX	UNIT S	NOTE
Operating Case Temperature	$T_C$	-40		+85	°C	Industrial
	$T_C$	0		+70	°C	Commercial
Total Tx and Rx Supply Current	$I_{CC}$			600	mA	
Supply Voltage	$V_{CCT}/V_{CCR}$	3.15	3.3	3.45	V	
Power Consumption				2.0	W	
Transmission Distance	TD			20	Km	
Bit Rate for Tx 1270nm			9.9532		Gbps	
Bit Rate for Rx 1577nm			9.9532		Gbps	

## 4.3. Transmitter Optical Characteristics

PARAMETER	MIN	TYP	MAX	UNITS	NOTE
Data Rate		9.9532		Gb/s	
Center Wavelength	1260	1270	1280	nm	
Spectral Width (-20dB)			1	nm	
Side Mode Suppression Ratio(SMSR)	30			dB	
Average Output Power (AOP)	+4		+9	dBm	
Burst enable is off power (Poff)			-45	dBm	
Extinction Ratio	6			dB	1
Transmitter Mask (PRBS 2 <sup>31</sup> -1@9.9532G)	Compliant With ITU-T G9807.1				1

Note 1. Measured with a PRBS 2<sup>31</sup>-1 Test Pattern @9.9532Gbps

## 4.4. Receiver Optical Characteristics

PARAMETER	MIN	TYP	MAX	UNITS	NOTE
Data Rate		9.9532		Gb/s	
Center Wavelength	1575	1577	1580	nm	
Sensitivity (PRBS 2 <sup>31</sup> -1@9.9532G, ER 8.2 TX)			-28.5	dBm	1
Overload (PRBS 2 <sup>31</sup> -1@9.9532G, ER 8.2 TX)	-9			dBm	1
Loss of signal assert Level	-39			dBm	
Loss of signal De-assert Level			-29	dBm	
Isolation (1550~1560nm) into 1577nm RX	35			dB	
Isolation (1490~1500nm GPON) into 1577nm RX	25			dB	
Isolation (1260~1330nm XGS-PON) into 1577nm RX	31			dB	
Isolation (1524~1544nm NGPON2) into 1577nm RX	27				
Isolation (1596~1603nm NGPON2) into 1577nm RX	31				
Isolation (1603~1625nm PtP) into 1577nm RX	35				
Isolation (1625~1650nm) into 1577nm RX	35				
Isolation (Internal 1260~1280nm Tx) into 1577nm RX	35				

## XGSPON-STICK

---

Note 1. Measured with a PRBS 2<sup>31</sup>-1 Test Pattern @9.9532Gbps and ER=6dB, BER ≤1.0E-3

## 4.5. Transmitter Electrical Interface Characteristics

PARAMETER	MIN	TYP	MAX	UNITS	NOTE
Data Rate		10.3125		Gbps	
Data Input Swing Differential	190		1000	mVpp	
Date Differential Impedance	80	100	120	Ω	
Transmitter Disable Voltage - Low	0		0.8	V	
Transmitter Disable Voltage - High	2.0		Vcc	V	
Power Down Voltage Low	0		0.8	V	
Power Down Voltage High	2.0		Vcc	V	
TX Fault Assert Time	-		50	ms	
TX Fault Reset Time	10		-	μs	
Burst Turn On Time			51.2	ns	
Burst Turn Off Time			51.2	ns	
TX Power Down Assert Time			512	ns	1
TX Power Down De-assert Time			512	ns	2

Notes:

1. Measured to 10% of final supply current
2. Measured to 90% of final supply current

## 4.6. Receiver Electrical Interface Characteristics

PARAMETER	MIN	TYP	MAX	UNITS	NOTE
Data Rate		10.3125		Gbps	
Data Output Differential Swing	300		850	mVpp	
Loss of Signal (LOS)Assert Time			100	μs	
Loss of Signal (LOS) De-assert Time			100	μs	
Output Differential Impedance	80	100	120	Ω	

# 5. Power Consumption

## 5.1. Operating Power Consumption

Mode	Voltage (V)	Current (A)	Power (W)	Condition
Tx/Rx Traffic Status	3.3 V	≤0.606 A	≤2.00 W	OLT Connection Spirent Test Center Traffic Tester N6705B Power Analyzer Room Temperature

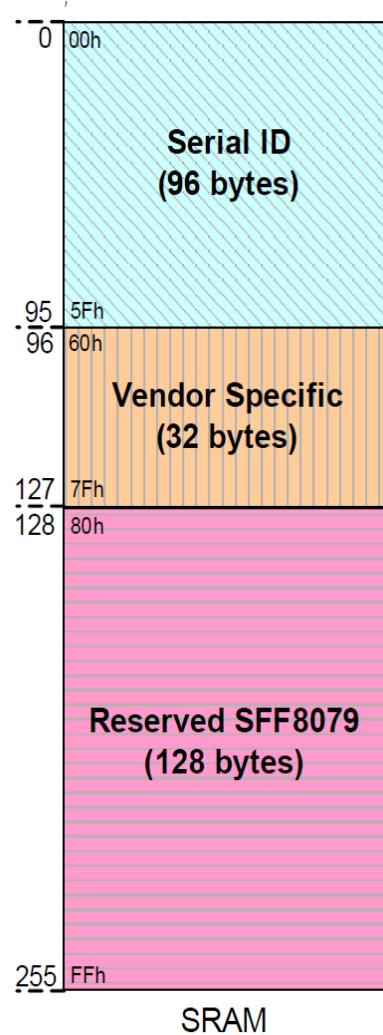

# 6. EEPROM Memory MAP

## 6.1. 24C08 EEPROM MAP

24C08 EEPROM		Download Location In M02180
000h	Set-up and Configuration Table 2 Registers (also location 060h)	→ (upper I2C device address , table 02h, registers 80h to CEh and E0h)
04Eh	Reserved	
04Fh	APD Lookup Table	
07Fh		
080h	Reserved	
0D3h	Bias and Modulation Look-up Table	→ State Machine will download 3 bytes at a time to bias and/or modulation output DACs as determined by temperature and operating mode
0D4h		
0FFh	Unused 1FCh-1FFh	→ (lower I2C device address , registers 00h to 5Fh)
100h	SFP Serial ID	→ (lower I2C device address , registers 60h to 7Fh)
1FBh	SFP Vendor Specific	→ (lower I2C device address , registers 80h to FFh)
200h	Reserved SFF8079	→ (upper I2C device address , table 0, registers 00h to 37h)
25Fh	Diagnostic Alarm and Warning Thresholds	→ (upper I2C device address , table 0, registers 38h to 5Fh)
260h		
27Fh	Diagnostic Calibration Constants	
280h		
2FFh	Reserved	The M02180 state machine will acquire realtime diagnostics from the optics and scale them using internal calibration contents and store the results in upper I2C device address , table 0 registers 60h to 77h. The state machine will also generate alarm and warning flags based on the diagnostic data .
300h		
337h		
338h		
35Fh		
360h		
37Fh		
380h		
3F7h	Diagnostic User-Writable EEPROM	→ (upper I2C device address , table 0, registers 80h to F7h)
3F8h		
3FFh	Diagnostic Vendor Specific	→ (upper I2C address , table 0, registers F8h to FFh)

The default lower I2C device address is 9Ch. It may be reprogrammed to A 0h or other values .  
The default upper I2C device address is 9Eh. It is always equal to the lower I2C device address +2.

## 6.2. Register : A0 Address

## XGSPON-STICK

decimal	hex	size	Name	value	description
Serial ID (BASE ID FIELDS)					
0	00h	1	Identifier	03	SFP or SFP+
1	01h	1	Ext. Identifier	04	GBIC/SFP function is defined by two-wire interface ID only
2	02h	1	Connector	01	SC/UPC (Subscriber Connector)

# 8. Qualifications

## 8.1. Regulatory Compliance

<b>Feature</b>	<b>Item</b>	<b>Description</b>
CE / UKCA	Certification/mark	EN55032, EN55035, IEC62368-1, EN50581-2012
NRTL(MET)	Certification/mark	UL 62368-1, 3 <sup>rd</sup> Ed, Issued: 2019-12-13, CAN/CSA C22.2 No. 62368-1:19
Safety	MET, CB	IEC60825-1, IEC 62368-1, UL 62368-1
EMC	EMI	FCC part 15 class B
		EN 300 386
		EN 55032:2015
	EMS	EN 55035:2017
	ESD to the electronic Pins	MIL-STD-883J Method 3015.9
Laser Eye Safety	Laser Eye Safety	Comply with IEC 60825-1 Class 1
	FDA 21CFR1040.10 laser safety	CDRH report
Reliability	Reliability /DVT	GR-468
	MTBF and FIT	Telcordia SR-332 method-4
RoHS&WEEE	RoHS 10	2011/65/EU(6) and 2015/863/EU(10), EN50581-2012

## 8.2. Safety labels

<b>Description</b>	<b>Label text</b>
NRTL_MET compliance	Communication service equipment US listed. Complies with UL 62368-1, CSA C22.2 No. 62368-1

	 <p>Complies with UL 62368-1 CSA C22.2 No. 62368-1</p>
ESD warning	Caution: This assembly contains electrostatic sensitive device.
Laser classification	Class 1 laser product
Laser product compliance	This laser product conforms to all applicable standards of 21 CFR 1040.10 at date of manufacture.
FCC standards compliance	Tested to comply with FCC standards for home or office use. This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
CDRH compliance	Complies with 21 CFR 1040.10
CE marking	There are various CE symbols for CE compliance.
UKCA marking	Complies with UKCA requirements

**i****FCC Notice.**

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

# 9. MTBF

## 9.1. Summary

This Reliability Failure Rate Prediction is based on the Bell core TR-332, 90% confidence level report is for the following P/Ns:

Table 1: P/N List

<b>Part Number</b>	<b>Description</b>
ZXOS11NPI	XGSPON ONU Stick, 20km, Tx 1270nm 9.953G, Rx 1577nm 9.953G,TX_Burst signal low active transmitter on, SFP+ form-factor, SC/UPC receptacle connector

All P/Ns are shared the same PCBA, Mechanics, OSA design, so only the LTI-SFP+LR is picked out for the reliability test.

## 9.2. Detail Prediction

The following MTBF Prediction is based on Bellcore TR-332. The calculation was made on the transceiver 85°C and 25°C temperature of 90% confidence level.  
Remark: Prediction data from our suppliers or Bellcore TR-332.

<b>PART DESCRIPTION</b>	<b>QTY.</b>	<b>FAILURE RATE @ 25°C</b>	<b>FAILURE RATE @ 85°C</b>
CAP, CERAMIC, NPO CC	28	2.60	12.24
RESISTOR, FIXED FILM RNR	45	1.60	13.56
FERRITE BEAD/INDUCTANCE	12	4.60	8.90
ZX300	1	18.90	156.50
Regulator	2	14.50	180.90
PLL IC	1	8.70	80.50
LASER DRIVER	1	8.90	92.30
TIA	1	45.50	202.40
OSA	1	84.00	294.00
	<b>TOTAL</b>	<b>189.30</b>	<b>1041.3</b>

**Failure Rate =997.30F.I.T.@+85°C With 90% Confidence Level.**

MTBF = (1 / FAILURE\_RATE) x 10<sup>9</sup> HOURS = 10<sup>9</sup> /1041.30 = 960,338 Hours  
The unit of FAILURE\_RATE is PER BILLION HOURS.

**MTBF = 960,338 hours @+85°C With 90% Confidence Level.**

**Failure Rate 189.30F.I.T.@+25°C With 90% Confidence Level.**

MTBF = (1 / FAILURE\_RATE) x 10<sup>9</sup> HOURS = 10<sup>9</sup> /189.30 = 5,282,620 Hours  
The unit of FAILURE\_RATE is PER BILLION HOURS.

**MTBF =5,282,620hours @+25°C With 90% Confidence Level.**

**According to the prediction data above, the Activation Energy was 0.36eV  
(i.e. Ea=0.36eV)**

#### The Expected MTBF with various environment conditions

(assume that the environmental factor =2.0, Grounded, Fixed and Uncontrolled)

Conditions	MTBF(Hours)
20 centigrade, 60% confidence level:	13,610,516
20 centigrade, 90% confidence level:	6,214,847
40 centigrade, 60% confidence level:	9,888,357
40 centigrade, 90% confidence level:	3,987,241
60 centigrade, 60% confidence level:	5,045,080
60 centigrade, 90% confidence level:	2,034,307

# 10. Installation /Removal Instruction

Protect the XGSPON STICK by inserting clean dust covers into them after the cables are removed.

Be sure to clean the optic surfaces of the fiber cables before you plug them back into the optical ports of another XGSPON STICK.

Avoid getting dust and other contaminants into the optical ports of your XGSPON STICK, because the optics will not work correctly when obstructed with dust.

It is strongly recommended that you do not install or remove the XGSPON STICK with fiber-optic cables attached to it because of the potential of damaging the cable, the cable connector, or the optical interfaces in the XGSPON STICK.

Disconnect all cables before removing or installing an XGSPON STICK.

Removing and inserting an XGSPON STICK can shorten its useful life, so

You should not remove and insert XGSPON STICKs any more often than is absolutely necessary.

The product is an electrostatic sensitive device which requires extreme care when handling, storage, deployment and any other occasions.

## 10.1. Electrostatics Discharge Sensitivy (ESD) and cleanlinesss

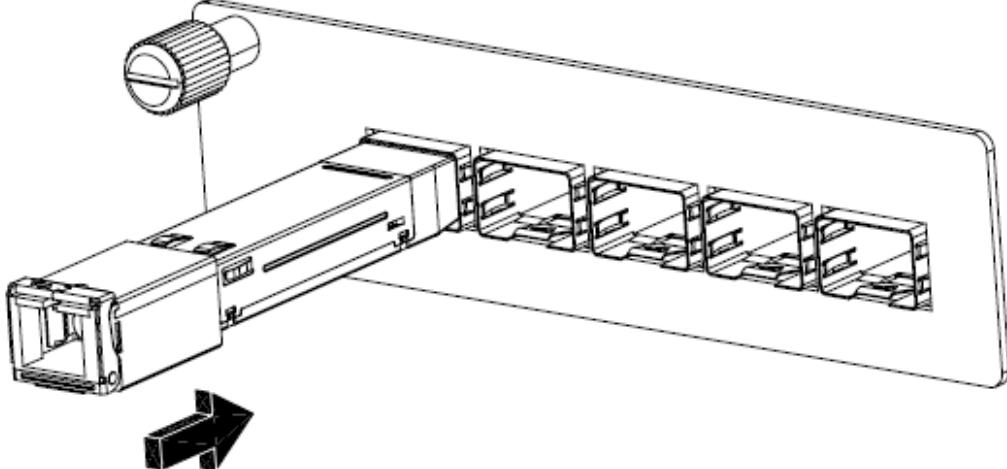

- 10.1.1 An ESD-preventive wrist or ankle strap must be worn all the time while handling the product.
- 10.1.2 Do not touch the electrical connect which is extremely ESD sensitive.
- 10.1.3 To prevent any contamination, the ducst cap should always be on the product unless the product is connected to the optical cable.
- 10.1.4 Installers must clean and visually inspect the optical cable in advance to connect the cable to the product using the devices specifically designed for the purpose.

## 10.2. Installation of the XGSPON STICK

To install XGSPON STICKs, follow these steps:

---

- STEP 1** Wear an ESD-preventive wrist or ankle strap and follow its instructions for use.
- STEP 2** Close the bail before inserting the XGSPON STICK.

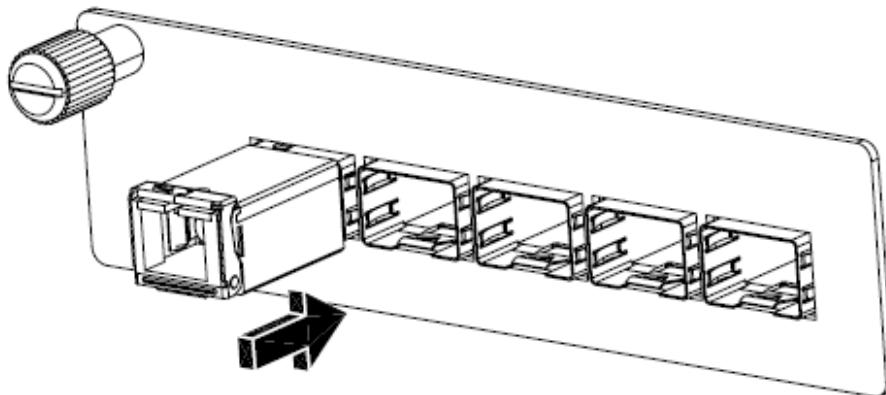

[Figure 9-1] Installing a XGSPON-STICK into port.

## XGSPON-STICK

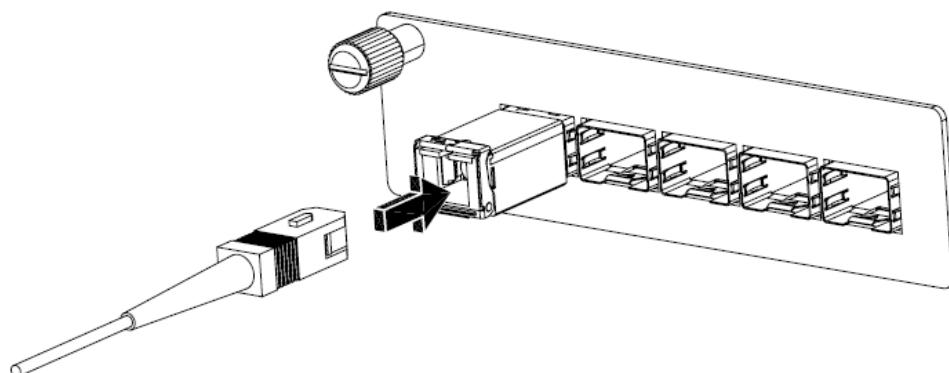

---

**STEP 3** Line up the XGSPON STICK with the port and slide it into the port.

[Figure 9-2] Completely seated XGSPON-STICK.

**STEP 4** Insert optic cable to the XGSPON STICK.

[Figure 9-3] Cabling a XGSPON-STICK.

Verify that the XGSPON STICKs are completely seated and secured in their assigned receptacles on the line card by firmly pushing on each XGSPON STICK.

If the XGSPON STICK is not completely seated and secured in the receptacle, you will hear a click as the triangular pin on the bottom of the XGSPON STICK snaps into the hole in the receptacle.

## XGSPON-STICK

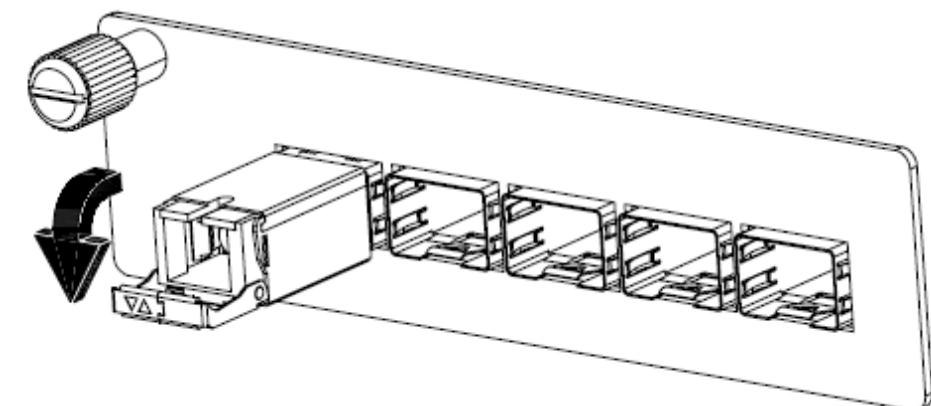

---

### 10.3. Removal of the XGSPON STICK

To remove XGSPON STICKs, follow these steps:

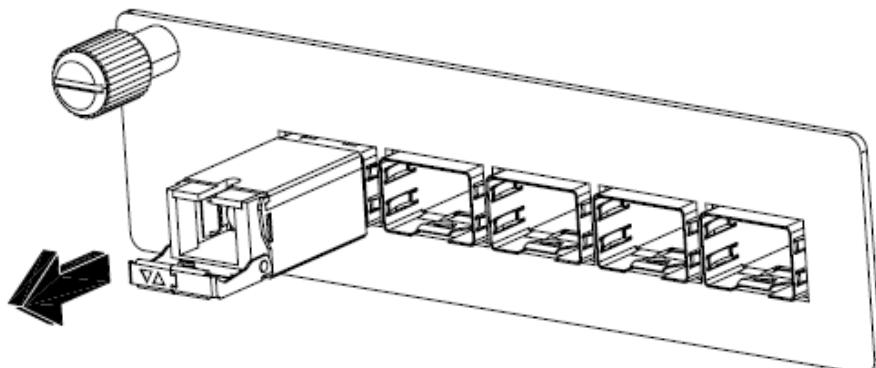

---

- STEP 1** Wear an ESD-preventive wrist or ankle strap and follow its instructions for use.
- STEP 2** Remove optical cables from the XGSPON STICK.
- STEP 3** Open and let down the bail on the XGSPON STICK with your index finger. If the bail is fastened and you cannot use your index finger to open it, use a small flat-blade screwdriver to open the bale clasp.

[Figure 9-4] Bail to unlatch.

- STEP 4** Grasp the XGSPON STICK between your thumb and index finger and carefully remove it from the port.

[Figure 9-5] Pull the PON-STICK from the port.

## XGSPON-STICK

---

- STEP 5** Place the XGSPON STICK in its original packaging, antistatic bag, or other protective storage environment.
- STEP 6** Protect your line card by inserting clean SFP module cage covers into the optical module cage where the XGSPON STICK is not installed.
-

# 11. Configuration

## 11.1. SSH/Telnet Connection

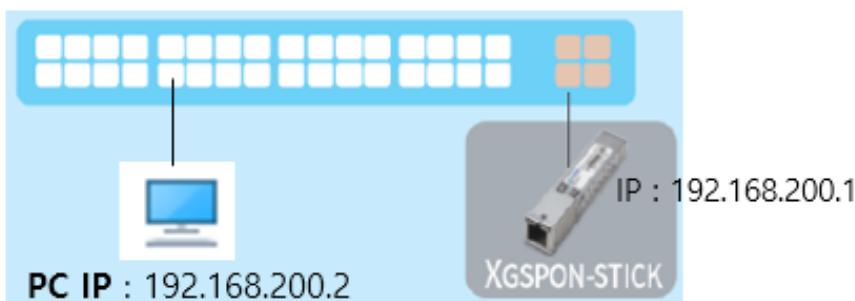

(The function is supported from Software V083.01)

The default xgspon-stick IP address is 192.168.200.1/24.

Support only untagged packet

Access from switch

Access from PC

In order to access SSH/telnet from the host switch, IP communication must be performed.

Step 1, set the IP of the host switch.

Step 2, connect by SSH/telnet from host switch

If success login, the prompt [/] # will be displayed

ID/PASSWORD:

SSH / TELNET : admin / zrmt123!@#

## 11.2. REGID Setting

(The function is supported from Software V083.01)

Registration ID can be modified through SSH/telnet as follows. Maximum 36bytes input is possible..

```
[/] # setenv reg_id ZRMT67061234  
[/] # saveenv  
[/] # reset
```

# 12. Miscellaneous

## 12.1. Safety Precautions

To avoid damaging the product or the human body, please observe the following Safety precautions.

ZARAM Technology assumes no liability for customer failure to comply with these requirements.

Do not remove module covers or shells when operating.

Ensure that the unit power is turned off during cleaning.

Ensure that other power/light sources are disabled during the cleaning of the optical interfaces.

Never look into the end of an optical interface while the product is operational. Laser radiation can be harmful to the human eye and injury may occur under prolonged exposure.

Do not install any unauthorized modifications to the product.

## 12.2. Product handling precautions

To avoid damaging the product or malfunction the product, please observe the following Product handling precautions.

Be careful not to excessive static applied.

The performance will be able decline if static with over +/- 2KV is applied.

Do not give a shock, impact or dropping.

If give strong shock, impact or dropping, those will be reasons about damage or breakdown or failure.

Manufacture does not have responsibility if troubles are made by users.

Do not give damages or removals to product label.

It will be very hard to identify the product, so that A/S is not available.

Try connecting after checking any foreign materials on Connector or Pad.

If any foreign material is on connector, contact failure can be happened.

Please clean the area, and then connect. Be careful not to give any damage.

Do not modify or take apart or fix.

If do above, risk will be happened such as product damage or breakdown or electric shock or fire.

Disconnect all cables before removing or installing the product.

Make sure that the power used meets the specifications of the product.

Removing and inserting the product can shorten its useful life, so you should not remove and insert product any more often than is absolutely necessary.

# 13. Troubleshooting Diagnostic

## 13.1. Debug from SSH/Telnet

### 13.1.1. Connect to xgspon-stick by SSH/telnet from Host

Refer to 11.1.1. SSH/Telnet Connection

### 13.1.2. Reset Strategy

In the following cases, resets the XGSPON-STICK.

- Watchdog : 60 seconds, the Stick resets the device if the software is unable to exit from a specific section such as a deadlock situation.
- If online is not available for 30 seconds after PON initialization.
- OMCI & PLOAM reset request
- If TCONT is not allocated for 600 seconds after online
- If ONU can not receive bw\_map in 20 seconds on activation normally.
- OMCI Tx fail(buffer full)
- Emergency error state

### 13.1.3. Logging

The logs are separated by module, and you can set the debugging level for each module.

Command	Description
<code>log set dbg_level &lt;dbg_level&gt;</code> <code>&lt;module&gt;.../(all)</code>	set debug level of the module.

## XGSPON-STICK

---

<b>log show dbg_level</b>	show all current debug level of the module.
<b>log show mod &lt;module&gt; ... (flash)</b>	show log of the specific module.
<b>log show line &lt;begin #/end #/all&gt; (flash)</b>	show all or a few lines of the log.
<b>log save dbg_level (factory)</b>	save all current debug level to flash(env) area. Factory : set factory default
<b>log fs erase</b>	Erase log flash area

Dbg\_level: OFF (0), Emergency (1), Error (2), Warning (3), Info (4), and Verbose (5)

Module : OMCI, PON, ETH, SFP, PTP, SYNC, ONU, LOGIN

Factory default level :

Warning : OMCI , PTP, SYNC, ONU, LOGIN  
Info : PON, SFP

```
ZXOS11NPI [/] # log show mod PON          -> display per module
01:53:41.291015 [PON] IN - zapi_show_pon_state_sync
01:53:41.291015 [PON] OUT - shmem_execute
01:53:41.291015 [PON] OUT - zapi_show_pon_state_sync
ZXOS11NPI [/] # log show line end 20      -> display latest 20 log
ZXOS11NPI [/] # log show line end 20 flash -> display latest 20 log from flash
```

- Emergency: Critical Error Conditions
  - PON: {pon-cpu fail} or {failed to reset serdes} or {TX fail} or { can't recovery omci buffer }
  - ONU: {can't open firmware file} or {wrong image file}
  - ETHC: {ethc-cpu fail} or {increased "ready error"}
- Error: system operation stopped and can be recovered after reset or re-initialization.
  - OMCI: { omci message parsing error } or { reboot setting with invalid parameter }
  - PON: { OMCI send error } or { fail get pon data(tcont, queue, gempport, serdes etc..) } or { failed to notify alarm } or { onu not connected } or { omci ds size too large } or { omci ds no buffer } { no acquired data for omci messege } or { failed to request Gpio-irq for [LOS/dying-gasp] } or { pon deactivate failed to create task (omci RX, Heartbeat task) }
  - ONU: { stopped onu/omci stack } or { not onlined within 30 seconds after init } or { message pool exhausted(omci message) failed to apply config(to subcpu) } or {occurring rogue onu } or { shared memory full failed to create task (wlog wr, onu TX/RX handler) }
  - ETHC: { failed to add acl rule } or { can't read mac/vlan table } or { failed to register ETH irq } or { failed to create task(packet RX, pon RX task, mcast\_task, igmp\_1sec\_task) } or { exceeding supported vlan }
  - SFP: { read/write fail } or { can't find I2C driver } or { eeprom failed to change } or { occurred rogue-onu }
  - SYNC : { failed to create sync task } or { failed to init fpga }

### 13.1.4. counter along data path – PON counter

check GEM port counter using CLI.  
you should enter “onu set pon counter gem enable” CMD to get GEM statistic information.

```
ZXOS11NPI [/] # onu reset pon counter
GEM port idx(2000000) counter reset
GEM port idx(2000000) counter reset
GEM port idx(2000000) counter reset
```

```
ZXOS11NPI [/] # onu show pon counter

-----
T-CONT idx : 0 | Alloc-ID : 1047(0x0417)

GEM idx | dir | GEM frames | GEM Payload bytes
-----
 003 | Rx | 1410 | 3381938
      | Tx | 1469 | 3351640
-----
 001 | Rx | 1411 | 3329176
      | Tx | 1470 | 3584136
-----
 Dir | total GEM frames | total GEM payload bytes
-----
 Rx | 2821 | 2939
 Tx | 2939 | 6935776
-----

-----
PON Rx FEC statistic
-----
Corrected byte : 0
Corrected code words : 0
Uncorrectable code words : 0
Total code words : 3445103697
```

Check FEC statistic

If ‘Uncorrectable\_code\_words’ counter increases, the optical signal is not good

Corrected\_bytes : The number of bytes that were corrected by the FEC function.

Corrected\_code\_words : The number of code words that were corrected by the FEC.

Uncorrectable\_code\_words : The number of code words that were not corrected by the FEC

Total\_code\_words : The number of total received code words.

(code words is 8-byte size)

### 13.1.5. counter along data path – SWITCH counter

PON-Tx, PON-Rx : PON-side switch port (connected with PON)

UNI-Tx, UNI-Rx : UNI-side switch port

CPU-Tx, CPU-Rx : Port on which the ponstick(ZXOS11NPI /ZXOS11EPI) CPU counter

Misc Packets

Pause : pause frame

Under : frame size is shorter than min length in pctrlb (switch show port ctrl)

Flag : Under & FCS error

## XGSPON-STICK

Over : frame size is longer than frame size in pctrl0 (switch show port ctrl)

Jabber : Over & FCS error

Error Packets

Rx : error is occur in phy level.

FCS : occur in phy level or duplex does not fit.

SOB/EOB : packet is broken.

Ready : Buffer storing packet is full

clear counter : switch show counter-clear

```
ZXOS11NPI [/] # switch show counter-clear
```

```
ZXOS11NPI [/] # switch show counter
```

	PON-Rx	PON-Tx	UNI-Rx	UNI-Tx	CPU-Rx	CPU-Tx

## XGSPON-STICK

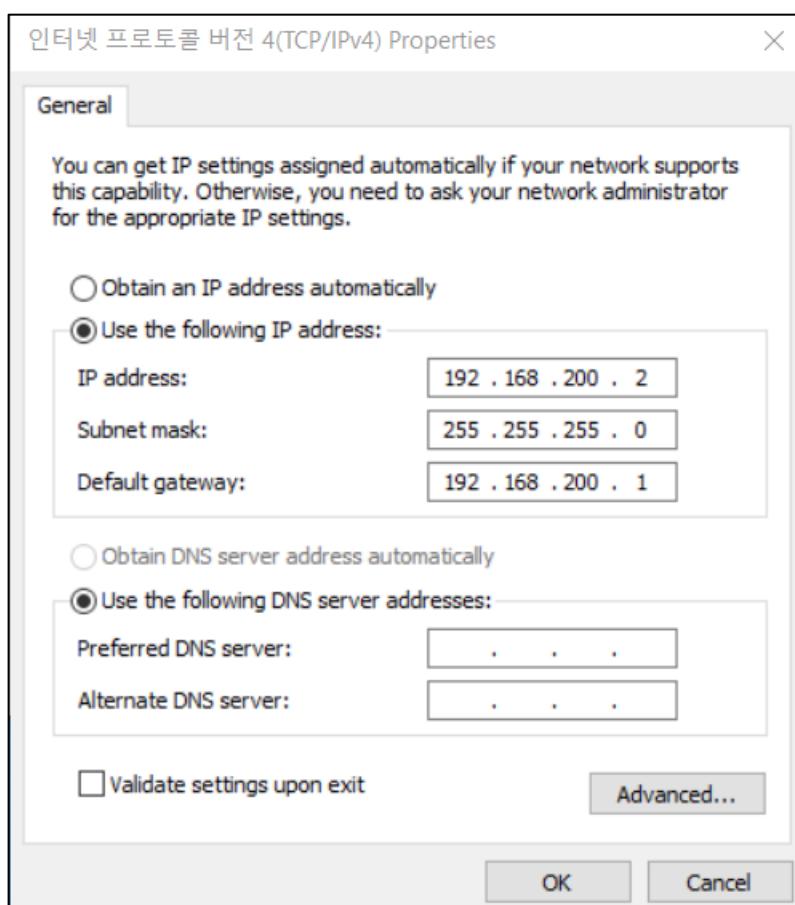

```
00:07:70:C1:1E:A8 |0-0000010|      0 |          1 | dynamic
-----
Total mac count : 8
aging period : 115500
```

Display the group joined to the multicast.

```
ZXOS11NPI [/] # mcast showg
- igmp-state : enabled
- query-timeout : 260
- immediate_leave_ : 1
-----
- group : 239.1.1.1 static:0,staticport:0x0,rowkey:0x0
vid:3000 p:1 80:00:02:c0:f2:84 192.85.1.50
```

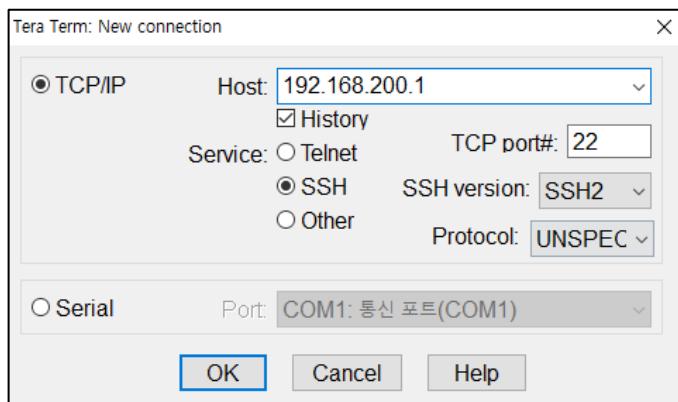

### 13.1.6. Method to Check PON Status

- Connect SSH/telnet on UNI side(user side).
  1. Default Ip for connecting SSH/telnet is 192.168.200.1
  2. Set ip of host pc to same network to XGS PON.

3. Connect to SSH/telnet

## XGSPON-STICK

Defaule ID/PASSWORD:

SSH / TELNET : admin / zrmt123!@#

- PON Link check list

1. Check Rx optical power. Rx power should be in the proper range. (-10) ~ (-28)dBm
  - A. connect a suitable attenuator. Too high rx optical power intensity can damage the laser diode. In this case it is impossible to use.
  - B. If low rx power, remove the attenuator. And if connected, clean the optical cable with an optical cleaner. if the optical cable is defective, replace it.

### Check FEC statistic

If 'Uncorrectable\_code\_words' counter increases, the optical signal is not good, so Check-list should be checked.

Corrected\_bytes : The number of bytes that were corrected by the FEC function.

Corrected\_cod\_words : The number of code words that were corrected by the FEC function.

Uncorrectable\_code\_words : The number of code words that were not corrected by the FEC function.

Total\_code\_words : The number of total received code words.

(code word is 8-byte size)

```
ZXOS11NPI [/] # onu show pon counter
```

```
PON Rx FEC statistic
```

```
-----  
Corrected byte      : 0  
Corrected code words : 0  
Uncorrectable code words : 0  
Total code words     : 3445103697
```

2. Check DDM Info

Access the DDM of the ONU Stick installed on the L2 Switch or wireless equipment to read and check the followings are all within the ranges defined in the specification (Tx Power, Rx Power, Bias Current and Temperature)

```
ZXOS11NPI [/] # sfp info  
diagnostic monitoring type: 0x68  
    internally calibrated  
temperature: 61.500C  
supply voltage: 3.277V  
tx bias current: 12.544mA
```

## XGSPON-STICK

```
tx output power: 3.802mW (5.801dBm)
rx optical power: 0.008mW (-21.079dBm) [average]
```

Item	Normal Range	Comments
Optic Tx Power	3.7~8dBm	
Optic Rx Power	-28.5~-10dBm	Caution: Too much optic-input-power(>-5dBm) can damage the transceiver
Transceiver Temperature	-40C~85C	
Transceiver Voltage	3.1~3.5V	
Transceiver Laser-Bias-Current	4~80mA	

### 3. Check pon serdes status

If SERDES state is bad, perform check list.

```
ZXOS11NPI [/] # onu show pon serdes
=====
ONU PON Serdes state
-----
Serdess state | Very good(0x3e)
=====
```

If value is under 0x38(Bad), please replug optical line or reboot XGSPON. If that does not work, change the stick.

### 4. Make sure the optical cable is connected well(reconnect to ensure a good contact) If not connected, sync state=Hunt

#### Check PON sync state

Sync state	Description
Hunt(init)	Initial state searching for the PSync pattern.
PreSync	perform PSync and SFC verification.
Sync	normal state
ReSync	In case of PSync or SFC verification fails, it enters the Resync state.

```
ZXOS11NPI [/] # onu show pon sync
=====
ONU Downstream Synchronization state
-----
Sync state | Sync(2)
=====
```

### 5. Check the Rogue ONU

If rogue\_onu value is 32768, Rogue detect state, optic tx has been disabled.

```
ZXOS11NPI [/] # printenv
⇒ rogue_onu=1 (0:func off, 1:func on, 32768: onu detect rogue & auto-tx-laser-off )
or
admin@ZXOS11NPI [/] # getenv rogue_onu
1
```

## XGSPON-STICK

6. Check whether the S/N matches the one registered in the OLT

In this case, sync state is sync and activation state rises to Serial\_Number state and then falls back to the beginning.

### Check pon activation state

Operation state	Description
Init	initial state, Once the downstream synchronization is attained, the ONU transitions to the Profile Learning substate.
ProfileLearning	Once an ONU receives a serial number grant, it responds with a Serial_Number_ONU PLOAM message
SerialNumber	After SerialNumber grant, set ONU-ID.
Ranging	Assignment of equalization delay by the OLT. Once the ONU receives the Ranging_Time message with absolute equalization delay, it transitions to the Operation state (O5)
Operation	normal operation state.
Intermittent_LODS	in case of loss of downstream synchronization. If signal is re-acquired before timer TO2 expires, the ONU transitions back into the Operation state (O5).
EmergencyStop	If an ONU receives a Disable_Serial_Number message, laser off

```
ZXOS11NPI [/] # onu show pon activation
=====
ONU Downstream Synchronization state
-----
Oper. state | Operation
=====
```

7. Check Process, Memory status

```
ZXOS11NPI [/] # sysmon cpu
CPU usage
cpu usage : 6.702 %
```

```
ZXOS11NPI [/] # sysmon memory
Memory usage
used/total = 7761424/30318736 (25.599432 %)
```

8. Check DDM info using Host Switch CLI

9. Check Optical Power using Optical Power Meter

- Provides CLI to search log history related to PON link.

```
ZXOS11NPI [/] # log show mod PON
```

For detailed usage, see 14.3.7. Troubleshooting Management.

### 13.1.7. Method to troubleshoot SFP-Host connect

- UNI Link check list

1. Check Host switch link status

## XGSPON-STICK

---

2. Check XGSPON-STICK UNI Serdes status

```
ZXOS11NPI [/] # switch serdes info
=====
SWITCH ETH Serdes state
-----
Serdess state | Very good(0x3e)
=====
```

If value is under 0x38(Bad), please replug optical line or reboot XGSPON. If that does not work, change the stick

3. Check port1 state.

```
ZXOS11NPI [/] # switch show port status
=====
PORT | PORT_STATE
-----+-----
0   | Enable
1   | Enable
8   | Enable
=====
```

If port1 is disable, check OLT configuration or reboot XGSPON.

4. Check OLT configuration

# 14. Remote Debug by OMCI

## 14.1. Remote debug Command list

To use remote debug in OLT, the following CLI should be used.

```
Typ:admin> # remote-debug ont ng2:28/1/41 "command"
The contents of the command are as follows.
    "help"
    "showconfig"
    "saveconfig"
    "onu show key info"
    "counter switch [pon / uni / cpu / clear]"
    "counter gem [index 0 / clear]"
    "counter fec [pon / clear]"
    "counter type [ani / uni / discard]"
    "switch macinfo [key]"
    "switch igmpinfo"
    "lct inet [192.168.200.1]"
    "lct mask [255.255.255.0]"
    "lct mac [00:11:22:aa:bb:cc]"
    "reg_id [string]"
    "rogue_onu [mode 1 / forced_on]"
    "prbs [on / off]"
    "sysmon [mdsync / cpu / process / memory]"
    "loopback [enable / disable] [vid# | all]"
    "tod enable"
    "pps enable"
    "dying-gasp-alarm enable"
    "ssh reset_passwd"
    "ssh uni [enable/disable]"
    "cap [start | stop | show | show detail]"
    "cap filter <reset>"
    "cap f etype [0x[HEX_NUM] | 0x0800 pt [DEC_NUM]]"
    "cap f [vid [DEC_NUM] | mactype [ucast|mcast|bcast] | m __:_:_:_:_:_:_]"
    "reboot onu"
```

command	description
<b>help</b>	Shows all menus used as commands
<b>showconfig</b>	Show basic information of stick such as image version, serial, registration id, lct info, etc
<b>saveconfig</b>	Saves the config modified by remote debug to flash memory. If the config value is changed, "saveconfig" must be executed.

## XGSPON-STICK

<b>onu show key info</b>	Shows key exchange and encryption information
<b>counter switch [pon/uni/cpu/clear]</b>	Shows the traffic counter of the switch inside the stick. When clearing, the counters of pon, uni, and all CPUs are cleared
<b>counter gem [index 0/clear]</b>	It shows upstream counter by gem port of pon block inside stick. First, enable and use, and disable when finished. When clearing, the count of all gem ports is cleared.
<b>counter fec [pon/clear]</b>	Show fec counter of pon port in stick.
<b>counter type [ani / uni / discard]</b>	Show us/ds counter at the ONU between UNI and ANI interfaces
<b>switch macinfo [key]</b>	Unicast MAC addresses learned by the ONU, if MAC bridge learning is used
<b>switch igmpinfo</b>	List of multiList of multicast IP addresses or related MAC addresses learned by the ONU through the IGMP protocol
<b>lct [inet/mask/mac]</b>	Modify network information to be used for SSH, etc. can check it with "showconfig" and save it as "saveconfig"
<b>reg_id [string]</b>	Modify the registration id passed to PLOAM. The string count that can be transferred to the remote debug is limited, so you can enter up to 18 characters, and you can check it with "showconfig". After changing, save it as "saveconfig"
<b>rogue_onu [mode 1/forced_on]</b>	<p>Rogue onu is forcibly generated for test purposes. There are only two types of rogue_onu mode: 1 (rogue_onu detect enable) and 32768 (rogue onu occurred).</p> <p>Test procedure ]</p> <ol style="list-style-type: none"> <li>1. Check rogue_onu=1 in "showconfig". (or perform "rogoue_onu mode 1")</li> <li>2. Stick reboot to OLT cli. (~ reboot via-ploam)</li> <li>3. Perform "rogue_onu forced_on".</li> <li>4. After 10sec, the stick changes to tx off state.</li> <li>5. Ont-enable disable/enable in OLT to adjust the optical tx off/on of the stick.</li> <li>6. Stick reboot to OLT cli. (~ reboot via-ploam)</li> <li>7. After online through ont-enable disable -&gt; enable with OLT cli, execute "rogue_onu mode 1" and "saveconfig". (Do not "forced_on" Again)</li> <li>8. Stick reboot to OLT cli. (~ reboot via-ploam)</li> <li>9. Stick booting and working in normal state.</li> </ol>
<b>prbs [on/off]</b>	<p>Turn on "prbs on" for the purpose of prbs test. After setting, save it as "saveconfig". If it is set to "prbs on", the prbs mode is enabled at the next booting, and the prbs mode is automatically disabled at the next boot after the test is finished and normal booting is performed</p> <p>Test procedure ]</p>

## XGSPON-STICK

	<ol style="list-style-type: none"> <li>1. Check prbs_mode=32769 in "showconfig" after "prbs on", "saveconfig".</li> <li>2. Stick reboot to OLT cli. (~ reboot via-ploam)</li> <li>3. After rebooting, the stick operates in prbs mode.</li> <li>4. After completion of test, stick plug off / on manually.</li> <li>5. Stick booting and working in normal state</li> </ol>
<b>sysmon</b> [mdsync/cpu/process/memory]	Shows the system monitoring information. mdsync : shows the current mib data sync counter. cpu : shows the current cpu usage as a percentage. process : shows the current status of each task. memory : shows the current memory usage as a percentage.
<b>loopback [enable / disable]</b> [vid#/all]	loopback test at ani port. Specific vlan or all vlan.
<b>tod enable</b>	Default : disable. ToD pin is SFP PIN(2). After stick is rebooting, then ToD will Disable.(Not support disable command)
<b>pps enable</b>	Default : disable. PPS pin is SFP PIN(9). After stick is rebooting, then PPS will Disable. (Not support disable command)
<b>dying-gasp-alarm enable</b>	Default : disable. Dying-gasp detecting pin is SFP PIN(7). After stick is rebooting, then Dying-gasp detecting will Disable. (Not support disable command)
<b>ssh reset_passwd</b>	Set ssh password to default.
<b>ssh uni [enable/disable]</b>	Default : disable. After stick is rebooting, then ssh uni will Disable. Used for connecting to ssh from Uni side.
<b>cap [start   stop   show   show detail]</b>	Captures incoming and outgoing packets to the CPU. cap start: start packet capture cap stop: stop packet capture cap show: show captured packet cap show detail: show detail captured packet
<b>cap filter &lt;reset&gt;</b>	display filter info. cap filter: show capture filter info cap filter reset: reset capture filter
<b>cap f etype [0x[HEX_NUM]   0x0800 pt [DEC_NUM]]</b>	set capture packet's filter info (etype:ether type, pt: ip protocol number)
<b>cap f [vid [DEC_NUM]   mactype [ucast mcast bcast]   m : : : : ]</b>	set capture packet's filter info(vid, mac type, mac address)
<b>reboot onu</b>	rebooting onu device

## 14.2. Remote debug Command details

- **help**

Shows all menus used as commands

gem_port_instance(index): 0x0400(3) Counter Cleared
gem_port_instance(index): 0x0401(4) Counter Cleared
Status: SUCCESS
```

### • counter fec [pon/clear]

Show fec counter of pon port in stick.

```
typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:81/1/42 "counter fec pon"
Format: ASCII
Corrected_bytes      : 0
Corrected_code_words : 0
Uncorrectable_code_words: 0
Total_code_words     : 40588101
```

## XGSPON-STICK

---

```
Status: SUCCESS

typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:81/1/42 "counter fec clear"
Format: ASCII
pon fec counter cleared
Status: SUCCESS
```

### • counter type [ani / uni / discard]

Show us/ds counter at the ONU between UNI and ANI interfaces.

```
typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:24/1/38 "counter type ani"
Format: ASCII
ANI side traffic counter
-----
UniCast(DS) : 1652427
UniCast(US) : 1652252
MultiCast(DS) : 1
MultiCast(US) : 0
BroadCast(DS) : 0
BroadCast(US) : 0
-----
to counter reset, "counter switch clear"

Status: SUCCESS
typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:24/1/38 "counter type uni"
Format: ASCII
UNI side traffic counter
-----
UniCast(DS) : 1652427
UniCast(US) : 1652252
MultiCast(DS) : 1
MultiCast(US) : 0
BroadCast(DS) : 0
BroadCast(US) : 0
-----
to counter reset, "counter switch clear"

typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:24/1/38 "counter type discard"
Format: ASCII
Discarded counter
-----
DS(P0) : 0
US(P1) : 0
-----
to counter reset, "counter switch clear"

Status: SUCCESS
```

### • switch macinfo [key]

Unicast MAC addresses learned by the ONU, if MAC bridge learning is used.

Considering the buffer size, the max list is limited to 1000, and if you want to output the counter after 1000, insert the Next Key that is output after executing the command and print the list after that.

```
typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:24/1/38 "switch macinfo 0"
Format: ASCII
-----
 mac address | port | fid | aging time | attr
-----+-----+-----+-----+
00:10:94:00:00:02 | PON | 0 | 125 | dynamic
00:10:94:00:00:01 | UNI | 0 | 125 | dynamic
3C:8B:CD:F0:5E:39 | PON | 0 | 33 | dynamic
-----
Total mac count : 3
Next Key : 0, "switch macinfo 0"

Status: SUCCESS
```

## XGSPON-STICK

---

### • switch igmpinfo

List of multiList of multicast IP addresses or related MAC addresses learned by the ONU through the IGMP protocol.

```
typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:24/1/38 "switch igmpinfo"
Format: ASCII
IGMP packet information
-----
Port |      MAC      |      IP      |
-----+-----+
  1   00:10:94:00:00:05  192.85.1.7
-----
Status: SUCCESS
```

### • lct [inet/mask/mac]

Modify network information to be used for SSH, etc. can check it with "showconfig" and save it as "saveconfig"

```
typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:88/1/46 "lct inet 192.168.200.1"
Format: ASCII
inet : 192.168.200.1
Modified, Must execute "saveconfig"
This value is adapted after reset

Status: SUCCESS

typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:88/1/46 "lct mask 255.255.255.0"
Format: ASCII
netmask : 255.255.255.0
Modified, Must execute "saveconfig"
This value is adapted after reset

typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:88/1/46 "lct mac 00:11:22:aa:bb:cc"
Format: ASCII
mac = 00:11:22:aa:bb:cc
Modified, Must execute "saveconfig"
This value is adapted after reset

Status: SUCCESS
typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:88/1/46 "saveconfig"
Format: ASCII
Config save complete

Status: SUCCESS
```

### • reg\_id [string]

Modify the registration id passed to PLOAM. The string count that can be transferred to the remote debug is limited, so you can enter up to 18 characters, and you can check it with "showconfig". After changing, save it as "saveconfig"

```
typ:isadmin@NOKIA_NGPON2>#remote-debug ont ng2:88/1/46 "reg_id XGSPON"
Format: ASCII
reg_id=XGSPON
Modified, Must execute "saveconfig"

Status: SUCCESS

typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:88/1/46 "saveconfig"
Format: ASCII
Config save complete

Status: SUCCESS
```

## XGSPON-STICK

---

### • rogue\_onu [mode 1/forced\_on]

Rogue onu is forcibly generated for test purposes. There are only two types of rogue\_onu mode: 1 (rogue\_onu detect enable) and 32768 (rogue onu occurred).

```
typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:88/1/46 "rogue_onu mode 1"
Format: ASCII
Do not rogue_onu test Again, If you want, After reboot
rogue_onu=0x0001, Must execute "saveconfig"
```

Status: SUCCESS

```
typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:88/1/46 "saveconfig"
Format: ASCII
Config save complete
```

Status: SUCCESS

```
typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:88/1/46 "rogue_onu forced_on"
```

Format: ASCII

Status: FAILED

\* As onu goes to rogue\_onu immediately, can't normal Upstream traffic, so the status is displayed as FAILED.

### • prbs [on/off]

Turn on "prbs on" for the purpose of prbs test. After setting, save it as "saveconfig". If it is set to "prbs on", the prbs mode is enabled at the next booting, and the prbs mode is automatically disabled at the next boot after the test is finished and normal booting is performed

```
typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:88/1/46 "prbs on"
Format: ASCII
prbs mode on, Must execute "saveconfig"
```

Status: SUCCESS

```
typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:88/1/46 "prbs off"
Format: ASCII
prbs mode off Must execute "saveconfig"
```

Status: SUCCESS

```
typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:88/1/46 "saveconfig"
Format: ASCII
Config save complete
```

Status: SUCCESS

### • sysmon [mdsync/cpu/process/memory]

Shows the system monitoring information.

```
typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:88/1/46 "sysmon mdsync"
Format: ASCII
mibDataSync: 51
```

Status: SUCCESS

Status: SUCCESS
```

### • tod enable

Default : disable.

ToD pin is SFP PIN(2).

## XGSPON-STICK

---

After stick is rebooting, then Tod will Disable.(Not support disable command)

```
typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:88/1/46 "tod enable"
Format: ASCII
already enabled.
```

Status: SUCCESS

### • pps enable

Default : disable.

PPS pin is SFP PIN(9).

After stick is rebooting, then PPS will Disable. (Not support disable command)

```
typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:88/1/46 "pps enable"
Format: ASCII
1PPS output enabled. (SFP-PIN#9)
This setting is only maintained for this lifetime(until reboot). It is disabled on next boot.
```

Status: SUCCESS

### • dying-gasp-alarm enable

Default : disable.

Dying-gasp detecting pin is SFP PIN(7).

After stick is rebooting, then Dying-gasp detecting will Disable. (Not support disable command)

```
typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:88/1/46 "dying-gasp-alarm enable"
Format: ASCII
Dying-gasp alarm enabled. (SFP-PIN#7, low-active)
This setting is only maintained for this lifetime(until reboot). It is disabled on next boot.
```

Status: SUCCESS

### • ssh reset\_passwd

Set ssh password to default.

```
typ:isadmin@NOKIA_NGPON2>#remote-debug ont ng2:88/1/46 "ssh reset_passwd"
Format: ASCII
Remote-Debug's password set to the Default value.
```

Status: SUCCESS

### • ssh uni [enable/disable]

Default : disable.

After stick is rebooting, then ssh uni will Disable.

Used for connecting to ssh from Uni side.

```
typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:88/1/46 "ssh uni disable"
Format: ASCII
ssh uni disabled.
```

Status: SUCCESS

```
typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:88/1/46 "ssh uni enable"

Status: SUCCESS
```

### • cap filter reset

Reset capture packet's filtering info.

```
typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:24/1/64 "cap f etype 0x0800 pt 2"
Capture filter has been reset.

Status: SUCCESS
```

### • reboot onu

Restart onu device. (Because it reboots immediately, the omci response Status is always FAILED)

```
typ:isadmin@NOKIA_NGPON2># remote-debug ont ng2:24/1/64 "reboot onu"
Format: ASCII

Status: FAILED
```

# 15. CLI

ZXOS11NPI provides CLI for device management. CLI can be used using UART, SSH and Telnet.

## 15.1 Command list

section	command	comment
Environment	ver	Show version
	setenv	Set environment
	getenv	Show environment
	printenv	Show environment
	saveenv	Save environment
	passwd	Set password for SSH
Data access	zreg	Show asic register, set asic register
	zdump	Show the history of omci/register settings.
ONU Management	onu	Show pon info
	tftp	Get image from UNI
	wflash *	Upgrade using the image obtained by tftp.
L2 switch	switch	Show switch info
	mcast	Show mcast group, enable log
OMCI	showme	Show ME
	omci	Set attribute of ME for development
	alarm	Generate alarm for development
	arc	Enable alaram generation for development
Laser Driver	sfp	Show sfp info / set sfp info
	tx_state	Enable/disable optical TX
Log	log	Show log, set log level
cpu/mem status	sysmon	Show cpu/mem usage

## XGSPON-STICK

test	test *	Temporarily enable tod/pps/dying-gasp-alarm for test
Debug trace	sync	Show sync detail log
	ssh *	SSH packet trace and enable ssh on uni side.
	console/con *	Enable console output
	CFM	CFM command
	debug *	Development test command for inter cpu communication
Packet Capture	capture	Show captured incoming and outgoing packets to the CPU.

## 15.2 Command Syntax and Format

Format	Description
<b>Bold string</b>	Command
<i>Italics</i>	parameter
< A B >	Optional parameter, nothing or select one of them(A or B in case of left)
[ A B ]	Parameter, select one of them(A or B in case of left)

## 15.3. Command details

### • ver

Read software version

```
ZXOS11NPI [/] # ver
onu/omci stack version: 0.81.9-zaram (build 11987) Aug 14 2020 17:46:40
pon version: 0.3
ethc version: 0.3
image0: XXSD_V0.81.9 valid active committed
image1: XXSD_V0.81.9 valid
```

### 15.3.1. Environment Variable Management

env_name	Default	Description
target_image	0	Target image ( 0 or 1)
tc_type	1	0(2.5G), 1(10G)
tx_split	1	1(GEM split enable), 0(disable)
sn_vsid	"ZRMT"	VSID
sn_vssn	-	VSSN
vendor_product_code	0xffff	Product code
config_path	-	Full path of Configuration profile

## XGSPON-STICK

rogue_onu	1	1(enable), 0(disable), 0x8000(occurred rogue one)
sfp_pps	0	PPS value, 0(disable), otherwise(enable)
sfp_tod	0	Time of Date, 0(disable), otherwise(enable)
sfp_los	8	Loss Of Signal, 0(disable), otherwise(enable)
sfp_mod_abs	6	Module absent, 0(disable), otherwise(enable)
stick_board	1	1(stick board), 0(EVM board)
inet	""	IP address
netmask	""	Netmask
mac_addr	-	Device MAC Address

Table. Environment variables

### • **printenv**

Display current settings.

```
ZXOS11NPI [/] # printenv
fwenv(130) stored at 0x40000, size 4096 bytes, region1 992 bytes, region2 3072 bytes
properties:

sfp_rate_select_0(0) sfp_rate_select_1(0)
```

### • **getenv env\_name**

Read environment variables.

example. Read ID of running software image.

```
ZXOS11NPI [/] # getenv target_image
0
```

## XGSPON-STICK

---

- **setenv** *env\_name env\_value*

Set environment variable. This command set up the variable at temporary. This command saves environment variables temporarily. If you want to permanently save the changed configuration values, you need to run the **saveenv** command.

example. Change the firmware to be executed when rebooting.

**Caution] don't change value except reg\_id**

```
ZXOS11NPI [/] # setenv target_image 1  
target_image=1
```

- **saveenv**

Save the environment variable in flash memory.

```
ZXOS11NPI [/] # saveenv  
config-save offset: 0x00040000(133)  
done (494450 usec).  
config-save offset: 0x00050000(134)  
done (490591 usec).  
env load from primary  
env load area : 0x00050000
```

- **passwd -u user**

Change user's password(telnet and ssh common).

```
ONTUSER@ZXOS11NPI [/] # passwd -u ONTUSER  
ONTUSER current password:  
==== Password rule ===  
1. at least 8 characters  
2. not allowed to be the same as the userID  
3. must contain combined characters  
=> numeric, alpha characters  
  
input new password:  
re-input password:  
00:00:59.472013 [LOGIN] user ONTUSER's password is changed.
```

If not exist user, show below text.

```
ONTUSER@ZXOS11NPI [/] # passwd -u user  
Can't get pwd
```

### 15.3.2. Data access

- **zreg** *cpu\_name dir addr [value|length]*

cpu\_name : main, ethc or pon

dir : rd(read) or wr(write)

addr : target address (must be aligned by 4bytes)

value or length : value(in case of dir = wr), length(in case of dir = rd)

read 32-bit register(or memory).

Example 1. Read 16byte data from 0x81000300 in main CPU.

```
ZXOS11NPI [/] # zreg main rd 0x81000300 4
```

```
[0x81000300] 00000000 00000000 ffffffff 00000000
```

Example 2. Write 0x00000001 in 0x81000300 of main CPU

```
ZXOS11NPI [/] # zreg main wr 0x81000300 0x00000001  
WR [0x81000300] 0x00000001 & 0xffffffff SUCCESS!
```

**zdump omci [ # | seq range ]**

**zdump omci #**

- show total count of OMCI history

**zdump omci -N**

- Shows the last N list of OMCI history.

**zdump omci N-M**

- Shows a list of sequence numbers N to M in OMCI history.

```
ZXOS11NPI [/] # zdump omci #  
OMCI history total items#: 764
```

```
ZXOS11NPI [/] # zdump omci -10  
OMCI history (total #764 items):

### • **onu set loopback [enable/disable] [vid/all]**

For swap speed test

MAC swap loopback will be enabled/disabled via OLT-remote-debug-ME / remote-debug-via-ssh.

Specific vlan or all vlan

Only perform the packet MAC swap on the packet received from the OLT. And send the packet after MAC swap only back to the OLT without touching packet such as vlan.

```
ZXOS11NPI [/] # onu set loopback enable all
ZXOS11NPI [/] # onu set loopback enable 100
ZXOS11NPI [/] # onu set loopback disable
loopback disable
```

### • **tftp ip\_addr path/file\_name local\_path/file\_name**

ip\_addr : IP Address of TFTP server

R\_file\_name : Remote file name in TFTP server.

L\_file\_name : Local file name

Get file from remote TFTP server.

```
ZXOS11NPI [/] # tftp 192.168.1.42 tjchoi/XGS/release/omcid.XXTD_1_V0.82.2 ./omcid.XXTD_1_V0.82.2
tftp: socket 25
tftp: total 897384 bytes received
tftp: saved to "./omcid.XXTD_1_V0.82.2"
file size: 897384 bytes
```

### • **wflash file image\_address**

file\_name : wrote file name

image\_address : wrote address, (0x80000 or 0x580000)

write software image.

```
ZXOS11NPI [/] # wflash omcid.XXTD_1_V0.82.2 0x580000
file size: 897384 bytes
offset: 0x00580000
done.
```

## 15.3.4. L2 Switch Management

---

## XGSPON-STICK

---

### • switch show vlan <all>

Display VLAN configuration

No change : packet transparent

Push tag : add tag

Pop outer tag : remove outer tag

Untag: untag

Tag0/1: single tag

Outertag0/1, innertag1/0: double tag

```
admin@ZXOS11NPI [/] # switch show vlan
```

VI-	SID	FID	Member	Prio- Port	Priority Irity	Policy Enable Ena	Egress Tag(1)

606	1	23	23	23	23	23	23	23	23
715	2	13	13	13	13	13	13	13	13

## XGSPON-STICK

---

### • switch show counter

Display frame counter of each port. This CLI is used for traffic debugging.

Port 0 : ANI-side

Port 1: UNI-side

port 8: CPU-side

Misc Packets

Pause : pause frame

Under : frame size is shorter than min length in pctrlb (switch show port ctrl)

Flag : Under & fcs err

Over : frame size is longer than frame size in pctrl0 (switch show port ctrl2)

Jabber : Over & fcs err

Error Packets

Rx : error is occur in phy level.

FCS : occur in phy level or duplex does not fit.

SOB/EOB : packet is broken.

Ready : Buffer storing packet is full

```
ZXOS11NPI [/] # switch show counter
```

### • switch rule [0~6] [action] <value>

[action]	<value>	description
clear		Delete rule.
smac	[dis/val] Disable or AA:BB:CC:DD:EE:FF(MAC) XX:XX:XX:XX:XX:XX(MASK)	Compare source mac and if matched, perform action.
dmac	[dis/val] Disable or AA:BB:CC:DD:EE:FF(MAC) XX:XX:XX:XX:XX:XX(MASK)	Compare destination mac and if matched, perform action.
sip	[dis/val] Diable or	Compare source ip and if matched, perform

## XGSPON-STICK

	A.B.C.D(IP) X.X.X.X(MASK)	action.
dip	[dis/val] Disable or A.B.C.D(IP) X.X.X.X(MASK)	Compare destination ip and if matched, perform action.
sport	[dis/val] Disable or <0-65535>	Compare source port and if matched, perform action.
dport	[dis/val] Disable or <0-65535>	Compare destination port and if matched, perform action.
vlan	[dis/val] Disable or <1-4094>	Compare vlan and if matched, perform action.
protocol	[dis/val] Disable or <0-255>	Compare protocol and if matched, perform action.
ethertype	[dis/val] Disable or <0-65535<(ethertype)><0-65535>(MASK)	Compare ethertype and if matched, perform action.
interface	[pon cpu uni] [en dis]	Compare input port and if matched, perform action.
action drop	[en/dis]	Matched packets are dropped.
action counter	[en/dis]	Matched packets can be counted. It can also be found in the CLI show apply.
show		Display CLI "apply and profile"
show apply		Display compare rule.
show profile		Display action rule.
apply		It is necessary to apply the rules.

Procedure for applying rules.

- Set compare(match) rule you want. (smac ~ interface)

```
ZXOS11NPI [/] # switch rule 1 smac 00:0b:6f:aa:00:02 ff:ff:ff:ff:ff:ff
smac: 00:0b:6f:aa:00:02 mask: ff:ff:ff:ff:ff:ff
ZXOS11NPI [/] # switch rule 1 dmac 00:0b:6f:aa:00:03 ff:ff:ff:ff:ff:ff
dmac: 00:0b:6f:aa:00:03 mask: ff:ff:ff:ff:ff:ff
ZXOS11NPI [/] # switch rule 1 sport 80
sport: 80
ZXOS11NPI [/] # switch rule 1 dport 23
dport: 23
ZXOS11NPI [/] # switch rule 1 vlan 100
vlan: 100, mask: 4095
ZXOS11NPI [/] # switch rule 1 protocol 1
protocol: 1, mask: 1
ZXOS11NPI [/] # switch rule 1 ethertype 2048 65535
ethertype: 0x800, mask: 0xffff
ZXOS11NPI [/] # switch rule 9 interface uni en
interface port: 1 enable: 1, uni en
ZXOS11NPI [/] # switch rule 1 interface pon en
interface port: 0 enable: 1, pon en
```

- Set action rule. (drop/counter)

```
ZXOS11NPI [/] # switch rule 1 action counter en
counter enable
ZXOS11NPI [/] # switch rule 1 action drop en
drop enable
```

- Apply the rule.

```
ZXOS11NPI [/] # switch rule 1 apply
00:12:35.401222 [ETH] ACL Add Success: 1
```

## XGSPON-STICK

---

- 4) Check the rule.

Packets where Smac is 00:0B:6F:AA:00:02, dmac is 00:0B:6F:AA:00:03, src port is 80, dport is 23, vlan id is 100, ethertype is 2048(0x0800), protocol is 1 and input port is uni or pon(ani) are dropped and counted.

```
ZXOS11NPI [/] # switch rule 1 show
[Profile Rule]
INDEX: 1
smac - 00:0B:6F:AA:00:02
smask - FF:FF:FF:FF:FF:FF

## XGSPON-STICK

---

- **showme** *class\_id* \*

Shows all instances of ME corresponding to the specified *class\_id*.

```
ZXOS11NPI [/] # showme 5 *
5 Cardholder instances#2:

5 Cardholder.0180:
    actualPluginUnitType: 238
    expectedPluginUnitType: 238
    expectedePortCount: 0
    expectedEquipmentId:
    actualEquipmentId:
    protectionProfilePointer: 0
    invokeProtectionSwitch: 0
    arc: 0
    arcInterval: 0

5 Cardholder.0101:
    actualPluginUnitType: 49
    expectedPluginUnitType: 49
    expectedePortCount: 0
    expectedEquipmentId:
    actualEquipmentId:
    protectionProfilePointer: 0
    invokeProtectionSwitch: 0
    arc: 0
    arcInterval: 0
```

- showme** *class\_id* *instance\_id* <*max\_depth*>

Shows the attribute value of ME instance corresponding to the designated *class\_id* and *instance\_id*.

When an instance has another instance pointer as an attribute, the information of the instance corresponding to the connected instance pointer according to the *max\_depth* value is displayed. Same as 1 if *max\_depth* is not specified

### • sfp sn

Display serial number of Laser driver.

ZXOS11NPI [/] # sfp sn

vendor sn read success

Vendor SN : "OB181910210009 "

### • sfp rd page table\_id offset length

Read Laser driver IC.

page : 0 or 1 (page A0 or A2)

## XGSPON-STICK

---

table\_id : 0, 2, 3, 4 or (0, 0x80, 0x81, 0x82)  
offset : 0x00 ~ 0xff  
length : 0x01 ~ 0xff (offset +length ≤ 0x100)

Example. Read page(1), table\_id(0x80), offset(0x80), length(0x10)

```
ZXOS11NPI [/] # sfp rd 1 0x80 0x80 0x10
Page1 Table128 0x80, 16 bytes:
00000080 d7 1e 00 00 90 02 18 00 10 1f 00 01 5e 0a 4e 00 .....^N.
```

- **sfp wr page table\_id offset length da**

Write Laser driver IC.

Example. Write page(1), table\_id(0x80), offset(0x88), length(1), data(0x10)

```
ZXOS11NPI [/] # sfp wr 1 0x80 0x88 1 0x10
00000088 10
Verifying page1 table128, 0x88, 0x01:
00000088 10
```

- **tx\_state <0|1>**

Enable/disable optical Tx.

0: disable

1: enable

### 15.3.7. Troubleshooting Management

- **log show dbg\_level**

Display debugging level of the each modules.

```
ZXOS11NPI [/] # log show dbg_level
-----
level : 0(OFF), 1(FTL), 2(ERR), 3(WRN), 4(INF), 5(VRB)
OMCI   : 5
PON    : 3
ETH    : 3
SFP    : 5
PTP    : 5
SYNCE  : 5
ONU    : 3
LOGIN  : 3
```

- **log set dbg\_level [dbg\_level] [module .../all]**

[dbg\_level] : debugging level

[module] : module to be applied. if insert 'all', it applies to all modules.

Configure debugging level of the module.

```
ZXOS11NPI [/] # log set dbg_level 3 PON ETH
MODULE(ETH) => dbg level (3)
MODULE(PON) => dbg level (3)
ZXOS11NPI [/] # log show dbg_level
-----
level : 0(OFF), 1(FTL), 2(ERR), 3(WRN), 4(INF), 5(VRB)
OMCI   : 5
PON    : 3
ETH    : 3
SFP    : 5
PTP    : 5
SYNCE  : 5
ONU    : 3
```

## XGSPON-STICK

```
LOGIN : 3
-----
ZXOS11NPI [/] # log set dbg_level 2 all
-----
level : 0(OFF), 1(FTL), 2(ERR), 3(WRN), 4(INF), 5(VRB)
OMCI : 2
PON : 2
ETH : 2
SFP : 2
PTP : 2
SYNCE : 2
ONU : 2
LOGIN : 2
-----\
```

### • **log save dbg\_level <factory>**

save all debugging level of modules.

```
ZXOS11NPI [/] # log show dbg_level
-----
level : 0(OFF), 1(EMR), 2(ERR), 3(WRN), 4(INF), 5(PRN)
OMCI : 2
PON : 2
ETH : 2
SFP : 2
PTP : 2
SYNCE : 2
ONU : 2
LOGIN : 2
-----
ZXOS11NPI [/] # log save dbg_level
OMCI:(2) PON:(2) ETH:(2) SFP:(2) PTP:(2) SYNCE:(2)
config-save offset: 0x00040000(23989)
done (675935 usec).
config-save offset: 0x00050000(23990)
done (677366 usec).
```

```
ZXOS11NPI [/] # getenv mod_dbg_lvl
```

```
OMCI(level=2) PON(level=2) ETH(level=2) SFP(level=2) PTP(level=2) SYNCE(level=2)
```

factory reset debug level and save them to flash.

```
ZXOS11NPI [/] # log save dbg_level factory
OMCI:(2) PON:(2) ETH:(2) SFP:(2) PTP:(2) SYNCE:(2)
config-save offset: 0x00040000(23989)
done (675935 usec).
config-save offset: 0x00050000(23990)
done (677366 usec).
```

### • **log show mod [module ...] <flash>**

<module> : module to be applied

flash : (optional) show log from flash, if not entered it is taken from RAM filesystem.

Display log of the specific modules

```
ZXOS11NPI [/] # log show mod PON
file : /mnt/log_0.txt
00:03:57.192380 [PON] pon_deactivate(10) !!
00:03:57.897428 [PON] pon_deactivate(3) !!
```

```
ZXOS11NPI [/] # log show mod OMCI
file : /mnt/log_0.txt
00:00:04.510154 [OMCI] sfp state changed to on(1).
```

## XGSPON-STICK

---

### • log show line [*begin #|end #|all*] <flash>

*begin #* : The number of lines to be output from the beginning of the file.

```

- **sysmon memory**

shows the current memory usage as a percentage.

```
ZXOS11NPI [/] # sysmon memory  
Memory usage  
used/total = 7761424/30318736 (25.599432 %)
```

### 15.3.8. test

- **test <tod|pps|dying-gasp-alarm> enable**

ToD / 1PPS / Dying Gasp function is disabled because it is not an sfp+ spec pin.  
Temporarily enable tod/pps/dying-gasp-alarm for test

- **test rogue-onu <mode 1|forced\_on>**

Rogue onu is forcibly generated for test purposes. There are only two types of rogue\_onu mode:  
1 (rogue\_onu detect enable) and 32768 (rogue onu occurred).

## XGSPON-STICK

---

For details, see the description of "rugue\_onu [mode1/forced\_on]" in the Remote debug Command list section.

### 15.3.9. DEBUG trace

- **ssh trace packet (toggle)**

Enable / disable ssh packet log

```
ZXOS11NPI [/] # ssh trace packet  
trace.packet = 1  
ZXOS11NPI [/] # ssh trace packet  
trace.packet = 0
```

- **ssh uni [enable/disable]**

```
ZXOS11NPI [/] # ssh uni enable  
00:40:53.811251 [ETH] ACL Add Success: -6  
SSH UNI Enable(ACL:112)  
ZXOS11NPI [/] # ssh uni disable  
SSH UNI Disable(ACL:112)
```

- **console en**

Enable console output

- **cfm show <md | ma | stack | state | lm-counter>**

Show <md|ma|stack|state> list or lm-counter.

```
ZXOS11NPI [/] # cfm show stack  
CFM Stack
